First published in 1970 in Germany, this is a revised and enlarged English translation of what remains the standard introduction to the subject. Each section contains a detailed bibliography.

The volume starts with a -- posthumous -- paper by Alexander Kerns, written by Benjamins Schwartz, on the Indo-European tense system. This is followed by a rich array of papers on the reconstruction of older languages, ranging from Indo-European and Afroasiatic to Cretan.

The author addresses a number of issues in German and general phonology, using a specific problem in German phonology (the ach/ich alternation) as a springboard. These issues include especially the naturalness, or lack thereof, of the prescriptive standard in German, and the importance of colloquial pronunciations, as well as historical and dialect evidence, for phonological analyses of the standard language. Other important topics include the phonetic and phonological status of German /r/, the phonetic and phonological representation of palatals, the status of loanwords in phonological description, and, especially as regards the latter, the usefulness of Optimality Theory in capturing phonological facts. The book addresses itself to scholars from the fields of German and Germanic linguistics, as well as those concerned more generally with theoretical phonology (whether Lexical or Optimal). It may even appeal to the ortho è pistes and lexicographers of modern German.

Linguistic Analyses of Aphasic Language represents results from linguistic and neurolinguistic research on aphasic language performance. The contributions encompass all linguistic levels, ranging from phonetics to discourse, and present results on languages other than English. The findings and applied methods are both relevant to the study of aphasia in general and to cross-linguistic analyses. Furthermore, they have clear implications for language and speech therapy and thus show the importance of linguistic concepts for language testing and therapeutic intervention.

This book considers the evolution of the grammatical structure of words in the contexts of human evolution and the origins of language. The author challenges the conventional views of the relationship between syntax and morphology, the adaptationist view of language evolution, and the notion that language in some way reflects 'laws of form'.

In putting 'morphology' up for adoption as a chapitre particulier in 1929, Trubetzkoy started a debate regarding the boundary between phonology and morphology that has not ended yet. Essentially a record of a roundtable devoted to that boundary (Montr éal, October 1994), Trubetzkoy's Orphan is a full and fascinating picture of some very important contemporary attempts to define it. In addition to papers that focus on it, the volume also contains important papers on the closely related topics of 'morphoprosody' and the 'lexicon', views from 'the floor' and 'the outside', and edited transcripts of the discussions that took place at the Montr éal Roundtable. Intended both for practising and future phonologists and morpho-logists, Trubetzkoy's Orphan is a valuable record of a very important debate regarding one of the most central questions in phonology and morphology.
