"This book will familiarize warfighters and leaders with the MRAP vehicle, its capabilities and limitations, and planning considerations for its employment. The information found in this book does not replace or override any safety precautions, warnings, notes in existing technical and/or operator manuals, or unit standing orders or operating procedures ... MRAP does not mean any one specific vehicle. It is a generic term intended to apply to vehicles from different manufacturers that meet a common set of capabilities"--P. 1.

Issues of defence politics and policy have long been at the forefront of political agendas and defining of international affairs. However, the dramatic changes to the global system that have taken place since the end of the Cold War and particularly since the terror attacks on the USA on 11 September 2001 have amplified the world's attention toward political and policy issues of national, regional and global security. The focus of this volume is on examining the fundamental causes of, and defence policy responses to this new 'post-9/11' security environment. Edited by Isaiah (Ike) Wilson III and James J. F. Forest of the US Military Academy, West Point, USA, this volume is international in scope, with pieces written by experts in the field, offering a collection of up-to-date and balanced insights on key contemporary issues of concern to defence policymakers. The book will be an invaluable reference tool for academics and students, researchers in international relations, policymakers, media professionals and government officials.

The United States Marine Corps is the largest such force on the planet, and yet it is the smallest, most elite section of the U.S. military, one with a long and storied history. Here, in the most current version of the manual used by the Corps itself, is the basic guidebook used by all rifle platoon squad leaders. Discover: . the organization, weapons, capabilities, and limitations of the Marine rifle squad . the squad's role within a platoon and that of the fire teams within the rifle squad . offensive and defensive tactics and techniques . the various patrols squads conduct . numerous charts and illustrations . and much, much more. Military buffs, war-gamers, and anyone seeking to understand how American armed services are being deployed in the ever-changing arena of modern warfare will find this a fascinating and informative document.

Prior to the outbreak of WWII, the U.S. Army Ordnance Department began testing prototype half-track vehicles, including a White Motor Co. design that combined an M3 Scout Car with a White chassis. With armored bodies, an armored radiator shutter and bulletproof glass windscreen, the half-track offered crew protection and endurance under fire, while its speed - up to 45 mph - added a new dimension to infantry mobility. After testing and acceptance, the White design was standardized and during the war built by White, Autocar and Diamond T as the M3 half-track. Nearly 41,000 would be produced during the war, along with an additional 13,500 units of the smaller M2. Variants included the M13, M15 and M16 gun motor carriage, the M21 mortar carrier, and the T19 and T30 Howitzer motor carriages. Created in 1944, this TM 9-710 technical manual includes many photos and over 350 pages of text that reveal a great deal about the weapon's design and capabilities. Intended as a manual for those charged with operation and maintenance, this manual shows many aspects of its engine, cooling, power train and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.

From the former secretary of defense, a strikingly candid, vivid account of serving Presidents

George W. Bush and Barack Obama during the wars in Iraq and Afghanistan. When Robert M. Gates received a call from the White House, he thought he'd long left Washington politics behind: After working for six presidents in both the CIA and the National Security Council, he was happily serving as president of Texas A&M University. But when he was asked to help a nation mired in two wars and to aid the troops doing the fighting, he answered what he felt was the call of duty.

Delamination of ballistic glass impairs driver visibility and affects the readiness of Marine Corps tactical vehicles. To address this issue, RAND researchers estimate costs and vehicle availability under various repair and replacement scenarios.

Serves as an index to Eric reports [microform].
