API? ~~Web Programming With Cgi~~

The Common Gateway Interface (CGI) is a

standard for enabling applications (commonly

called CGI programs or CGI scripts) to

interact with Web servers and (indirectly)

with clients (e.g., Web browsers). CGI is

often used to generate dynamic Web

content using client input, databases and

other information services.

~~Web Programming with CGI~~

In computing, Common Gateway Interface is an

interface specification for web servers to

execute programs like console applications

running on a server that generates web pages

dynamically. Such programs are known as CGI

scripts or simply as CGIs. The specifics of

Download File PDF Web Programming With Cgi

how the script is executed by the server are determined by the server. In the common case, a CGI script executes at the time a request is made and generates HTML. In brief, an HTTP GET or POST request from the client may send HTML form

~~Common Gateway Interface - Wikipedia~~

The Common Gateway Interface, or CGI, is a set of standards that define how information is exchanged between the web server and a custom script. The CGI specs are currently maintained by the NCSA. What is CGI? The Common Gateway Interface, or CGI, is a standard for external gateway programs to interface with information servers such as HTTP servers.
